

UAB Sparkman Seminar Series in Global Health & SIFAT

*present
Seminar and Workshop*

Low Cost Water Testing Where There Is No Laboratory

Mike Turvey, MS
Lifewater
International

Mike Turvey has worked for over 30 years in water regulatory programs with the US Environmental Protection Agency (EPA). Currently working with Lifewater International, he has directed water well drill training and water testing projects in Haiti, Liberia, the Solomon Islands, and Ecuador.

Seminar:

Tuesday ■ June 20, 2006
12:15-1:15 pm
125 Ryals Public Health Building
1665 University Boulevard
Birmingham, Alabama

All are welcome. Lunch provided.

Workshop:

Wed-Thurs ■ June 21-22, 2006
8am-6pm
SIFAT International Training Campus
Lineville, Alabama

All are welcome. Please contact brysonk@sifat.org for more details

*According to the WHO, more than a billion people do not have acceptable access to an adequate supply of safe drinking water; furthermore, the UN estimates the cost of a village water project at more than \$50 per person. The **seminar at UAB** will focus on building practical skills that uses low-cost approaches for testing water in resource-constrained settings. It will be supplemented with background information on water testing (regulations, what to test for, accuracy of results, field equipment, etc.) **The workshop at SIFAT** is an intensive two-day training to build skills in using appropriate technologies for water and sanitation projects in the field. Participants also acquire skills in conducting community health education in water and sanitation.*
